

CSS Flexbox Master Series

Part 1

Next →

What is flexbox?

Flexbox is a one-dimensional layout model which means it deals with a single dimension at a time – as a row or column.

Flexbox is used to align items in a container, control the size of items and distribute spacing.

Flexbox terminology

Flex items are laid out along the main axis. The orientation of the main axis (whether it's horizontal or vertical) is determined by the flex direction property.

The cross axis is perpendicular to the main axis.
