

Developer Tips

# How to code consistently?

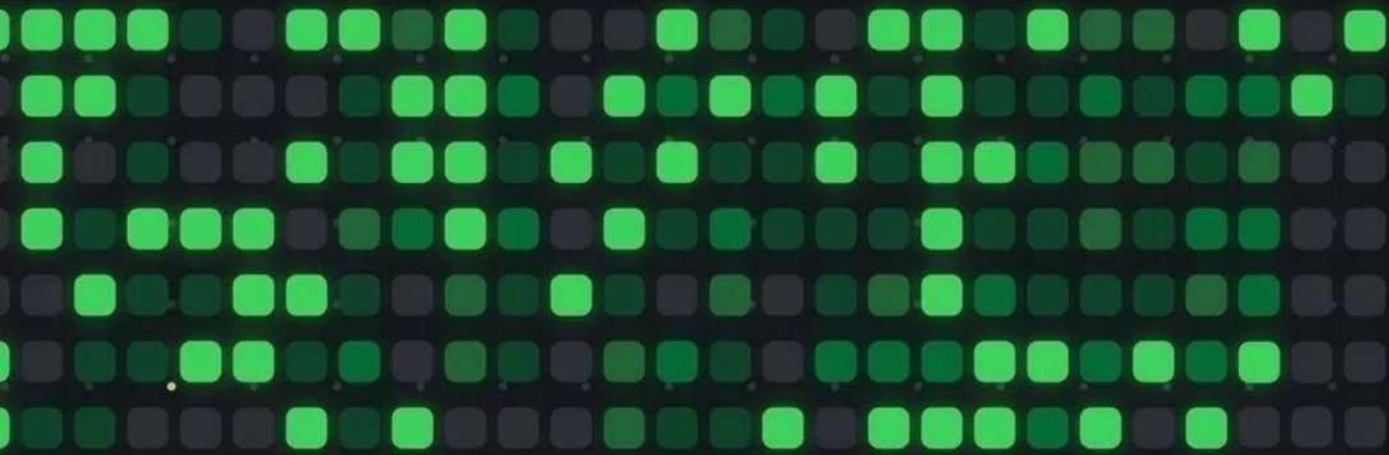

Make your **GitHub** look like this:

## Developer Tips

Consistency is the most important factor irrespective of your intelligence and talent. **Coding consistently** can make a huge difference.

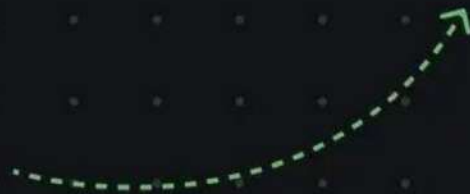

# Start by **defining consistency.**

Define what is consistent for you, it can be even 1 hour each and every day.

Here are some tips that will help you code consistently:

# Work on your dream project

Working on your dream project can be a great way to **stay motivated and consistent**. You will code every day and solve the problems you are facing in building your dream project.

# Start a challenge

Do something like **100 days of** Ethereum. You will focus on coding in solidity and working with Ethereum for 1 hour every day for 100 days.

# Participating in Hackathons

Participating in hackathons can be a great way to stay consistent and especially **learn new stuff** and earn amazing rewards.

# Fork some good projects

Forking good projects and understanding them and making some changes according to your ideology can be a great learning curve and you can see how professional code is written.

# Contributing to other people's code

Once you are intermediate you can contribute to other people's code as well as solve people's issue on github and help them out.

## Developer Tips

Other general things that will help you motivate and **improve your consistency**:

**Planning your tasks before getting started.**

**Find the field you want to work in.**

**A good environment.**

**Keep building projects after you learn a tech-stack**
