

Console Object Methods In JavaScript

In JavaScript, the console is an object which provides access to the Browser Debugging Console.

Shortcut Keys to open Browser Debugging

Console:

Windows: Ctrl + Shift + K or F12

Mac: Cmd + Option + K

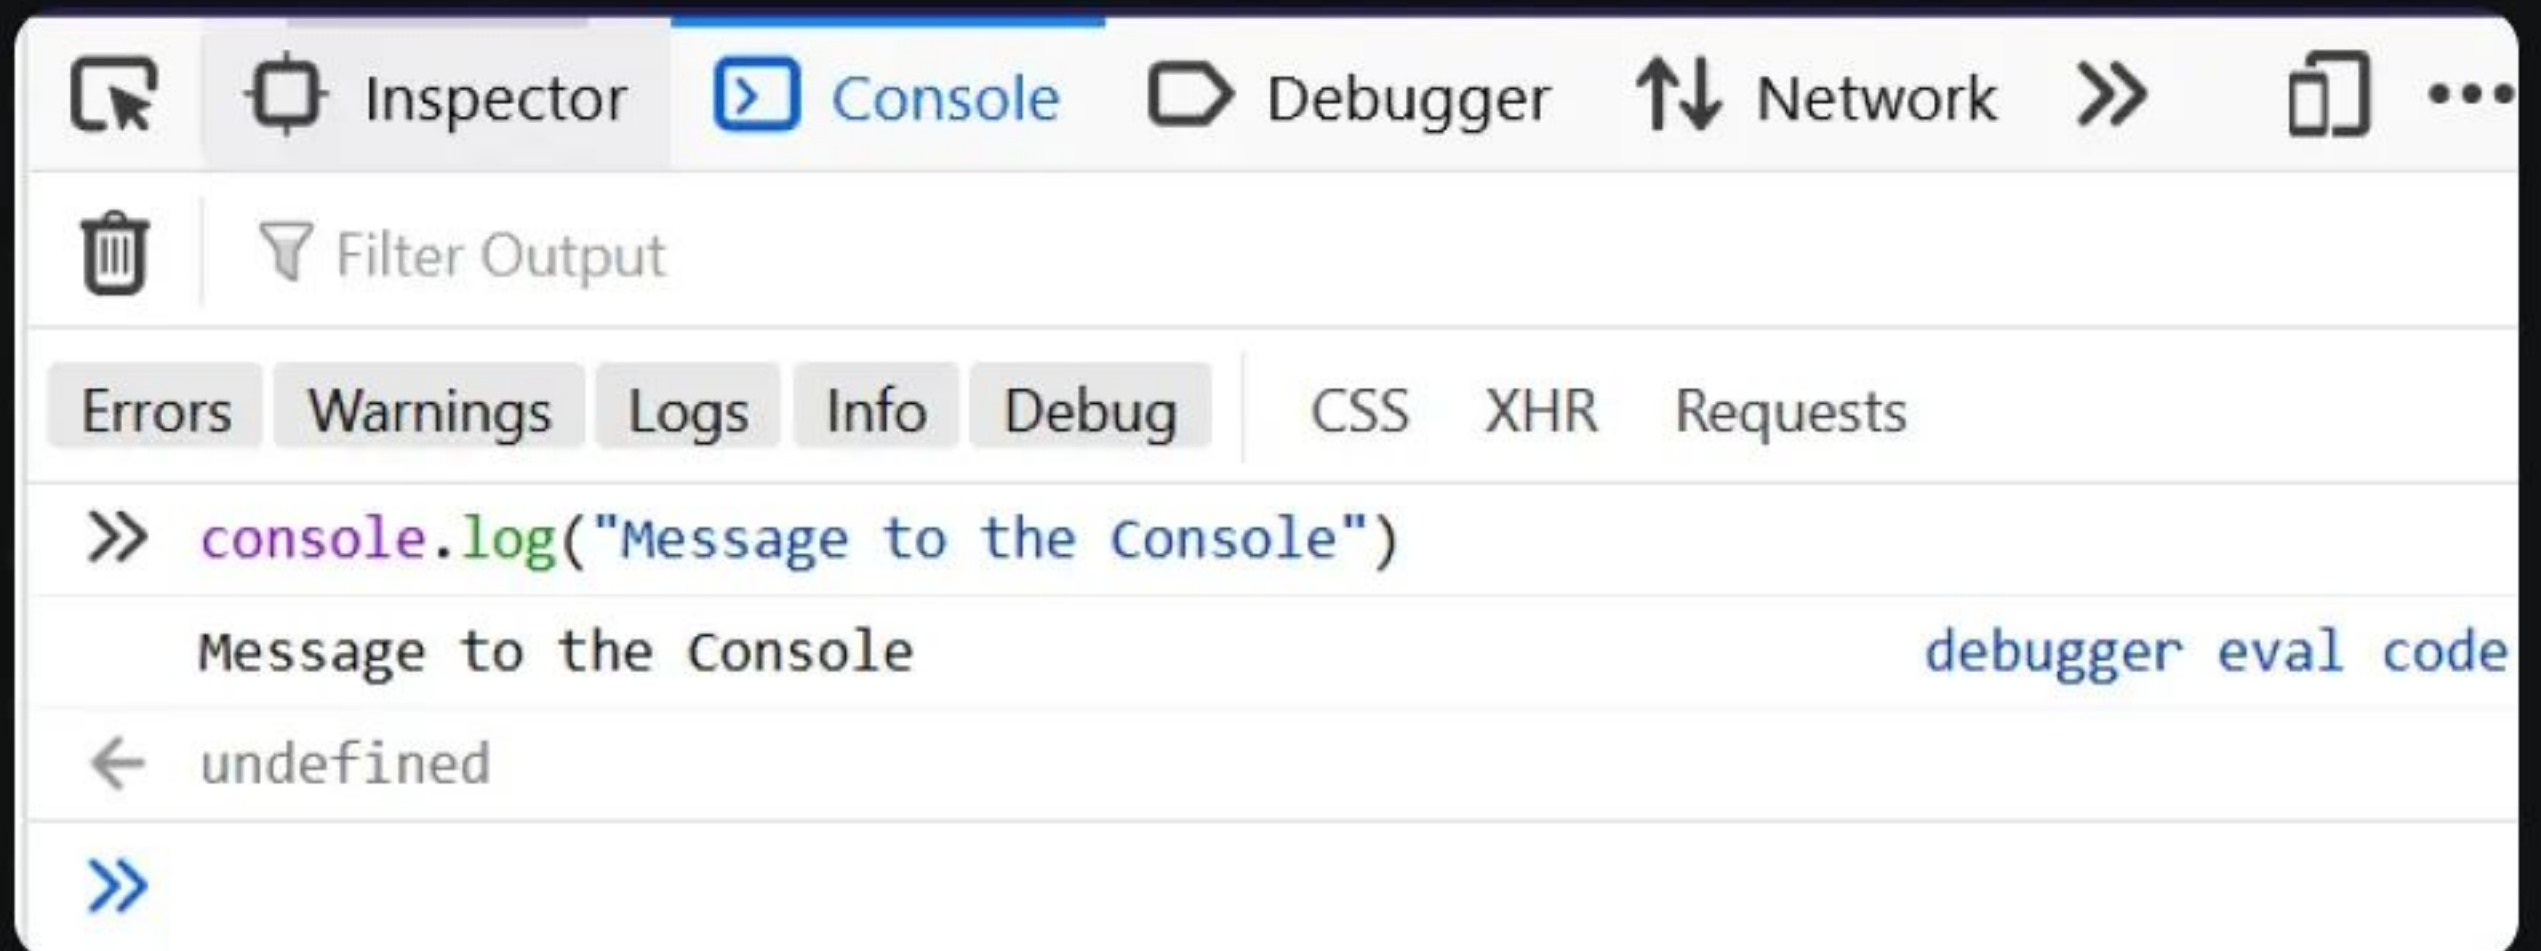

@hi.coders
Full-stack Dev

.log()

Outputs a message to the Browser console.

```
console.log("Message to the Console");
```

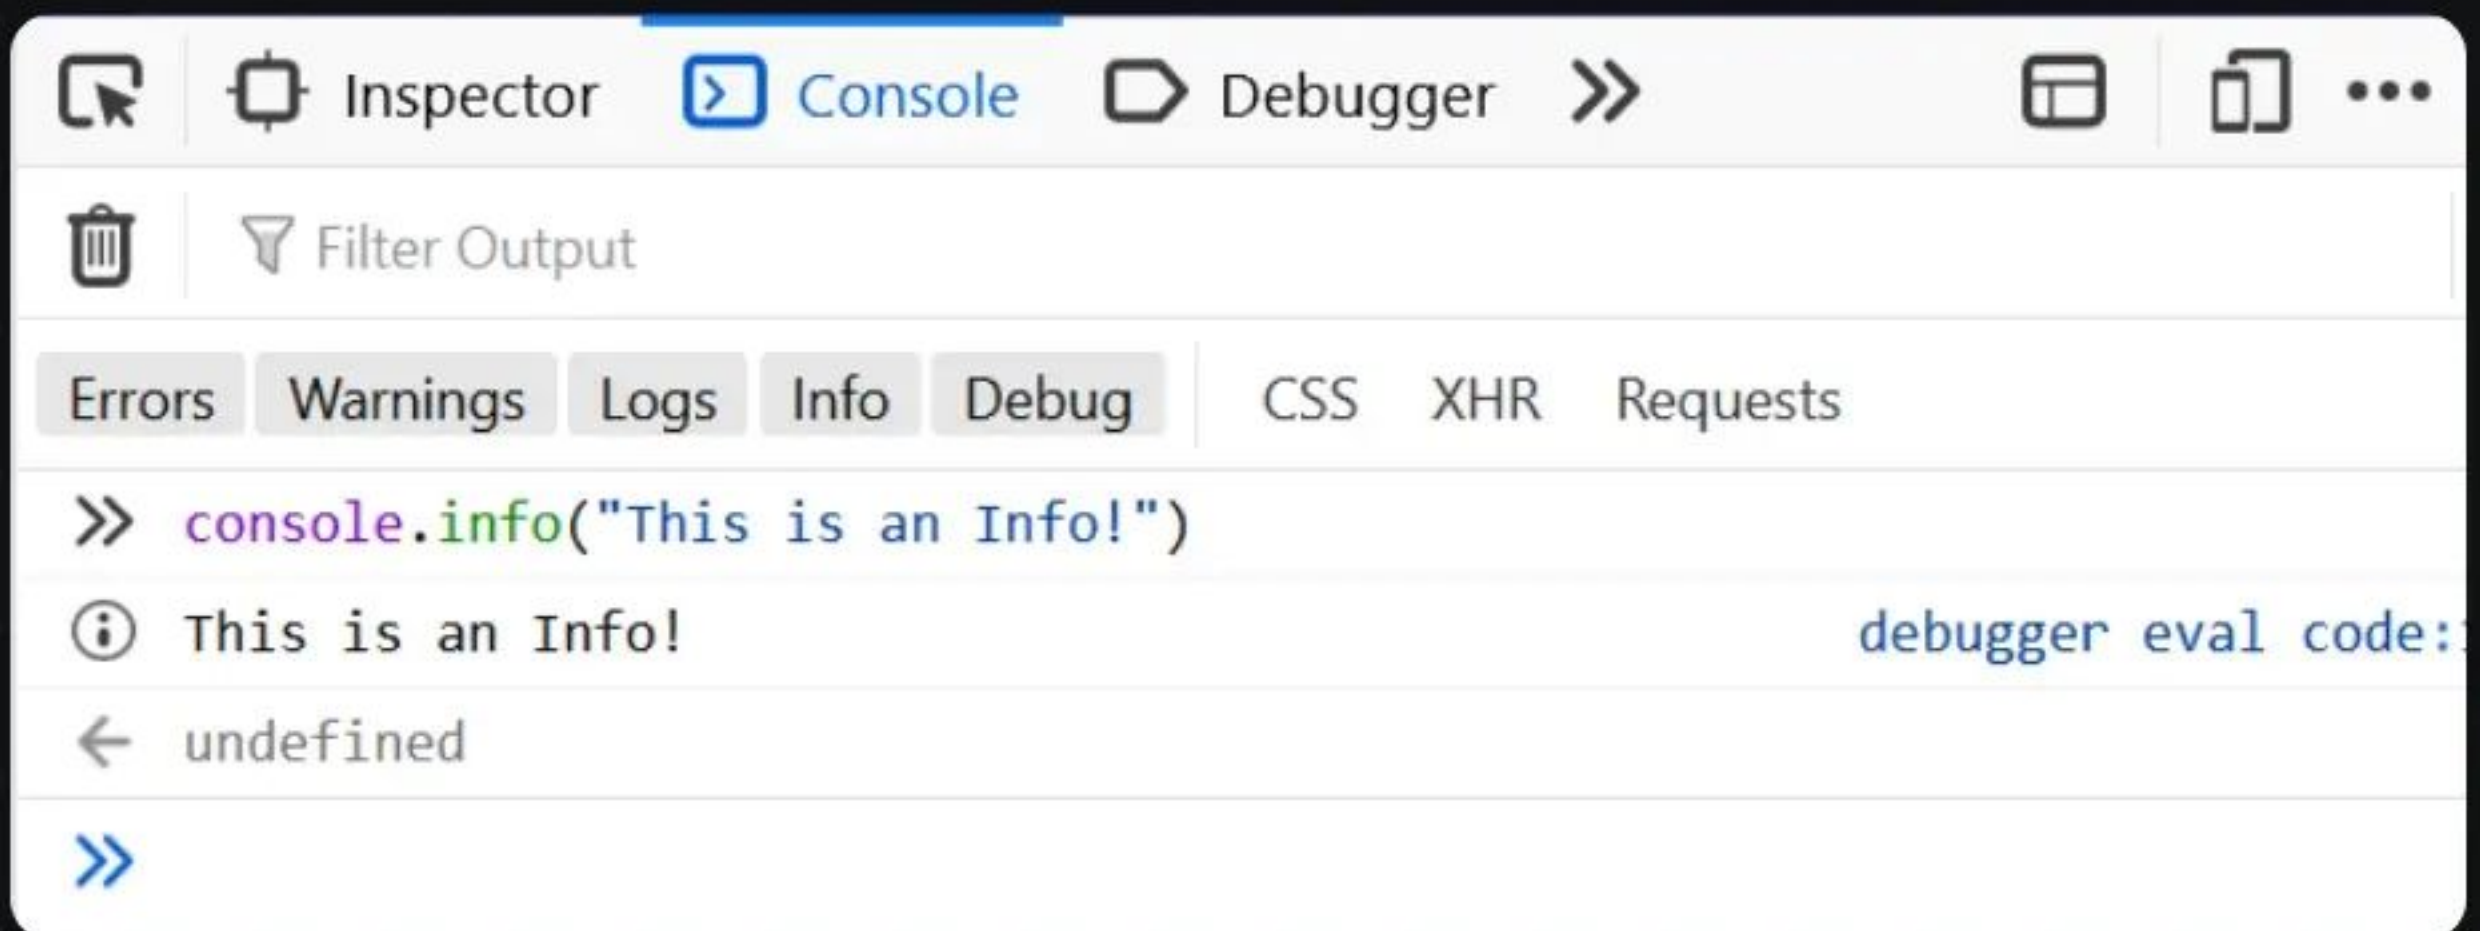

.info()

Outputs a message to the Browser console.

```
console.info("This is an Info!");
```

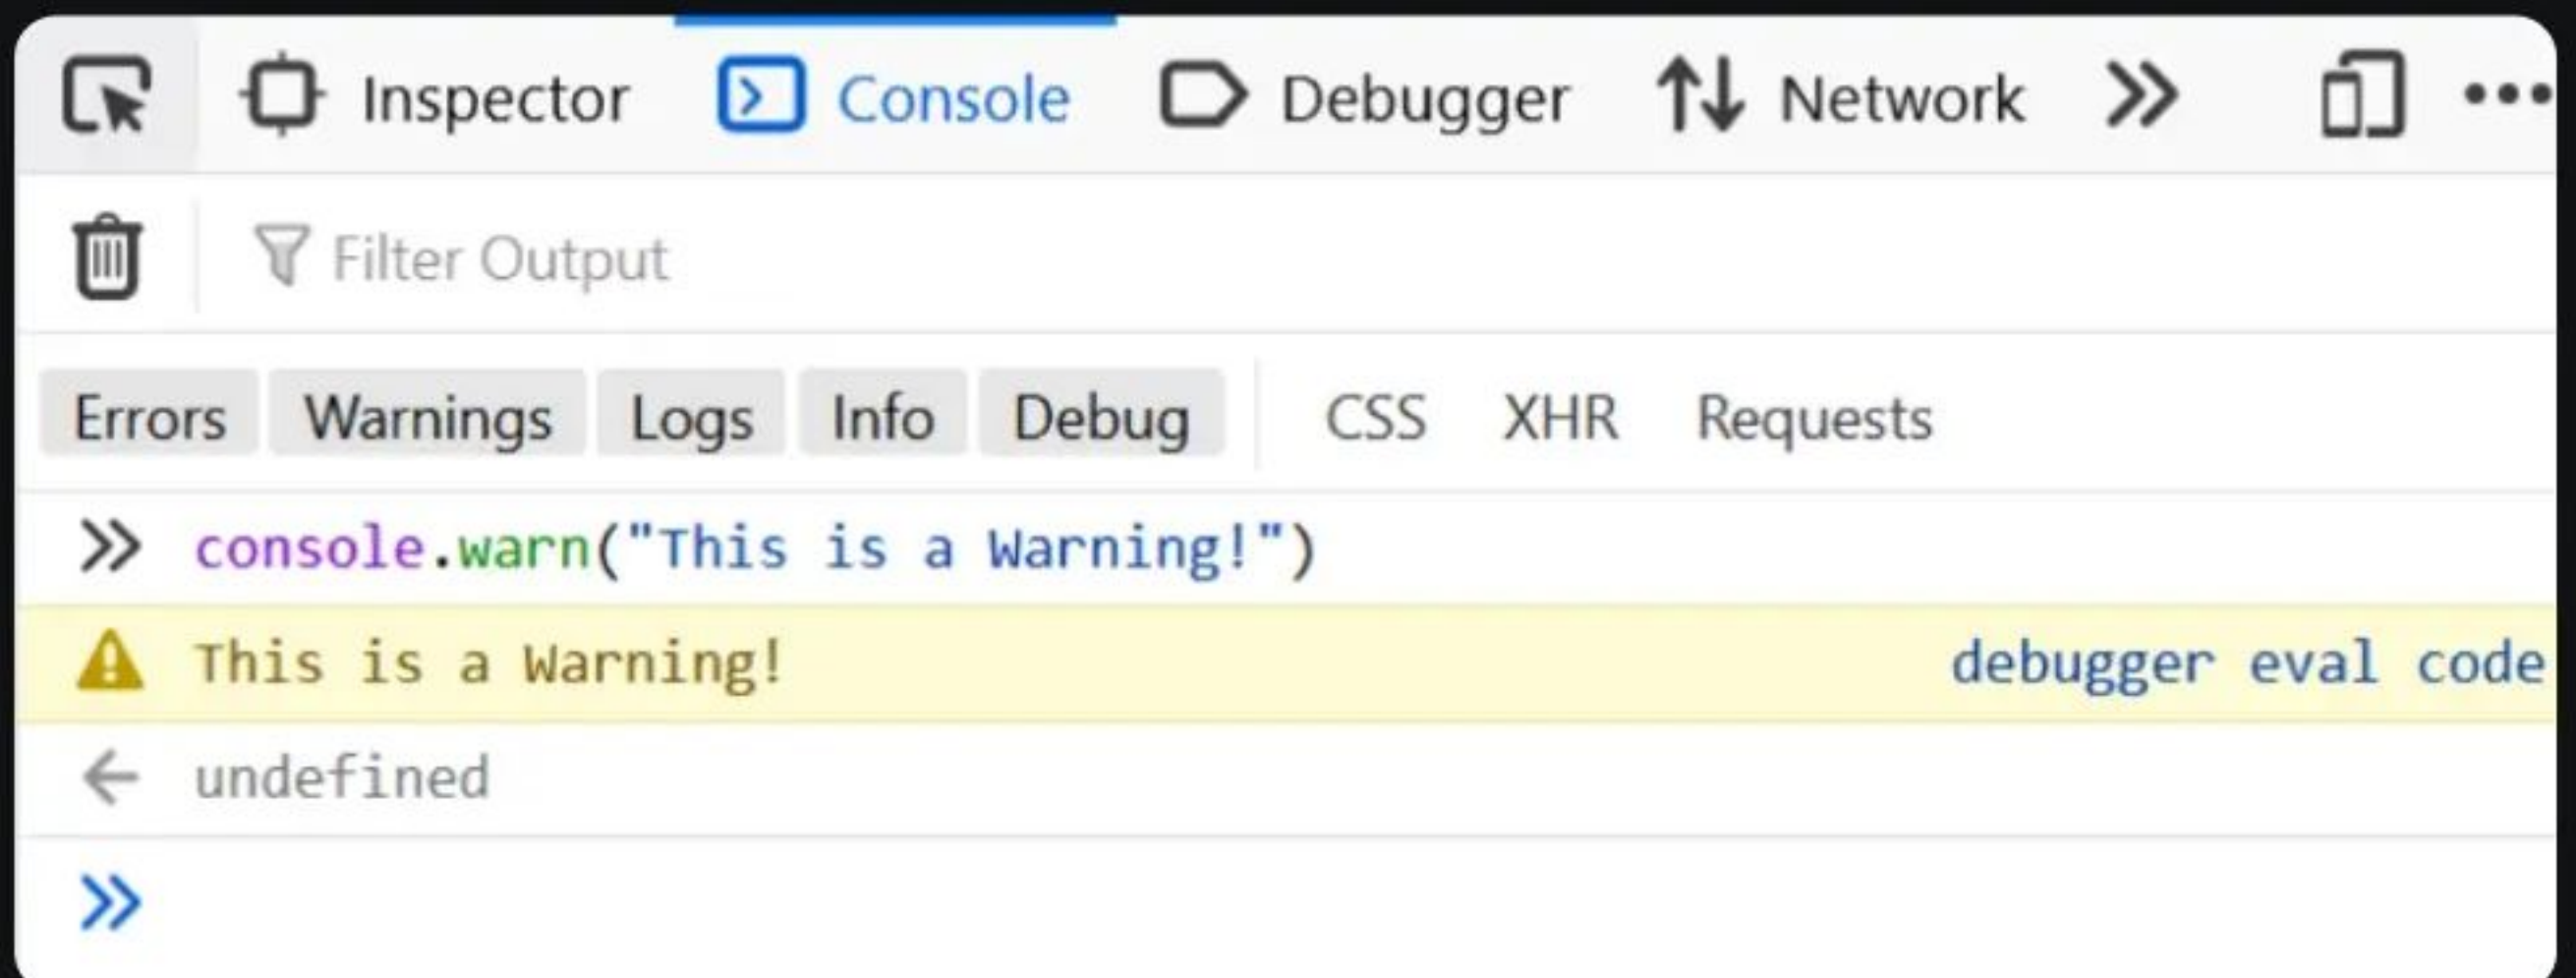

.warn()

Outputs a warning message to the Browser console.

```
console.warn("This is a Warning!");
```

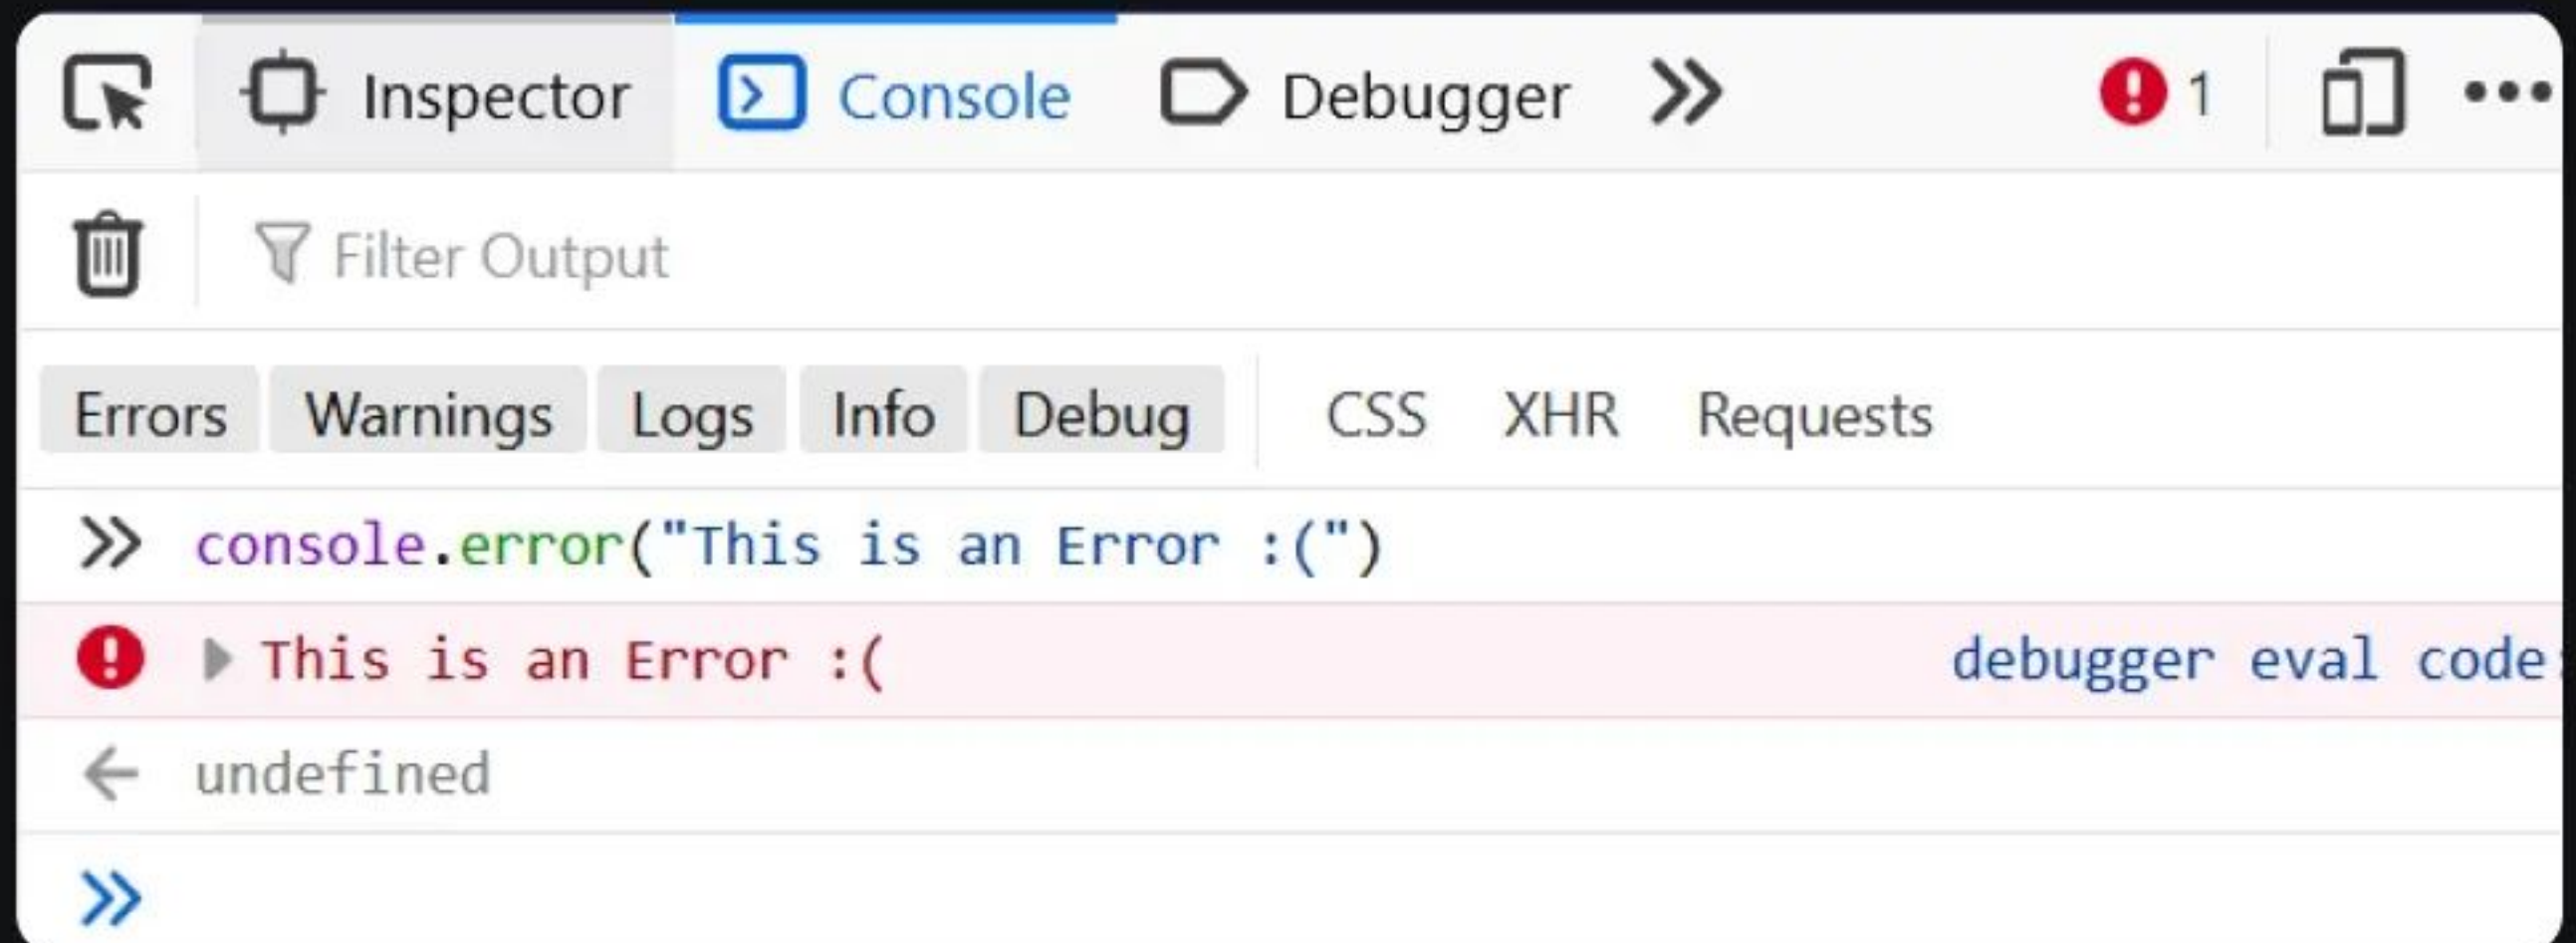

.error()

Outputs an error message to the browser console.

```
console.error("This is an Error :(");
```

.table()

Displays tabular data as a table.

```
console.table([
  {
    firstName: "John",
    lastName: "Doe",
    email: "john@gmail.com",

  },
  {
    firstName: "Emily",
    lastName: "Jones",
    email: "emily@gmail.com",

  }
]);
```

console.table()

debugger eval code:1:9

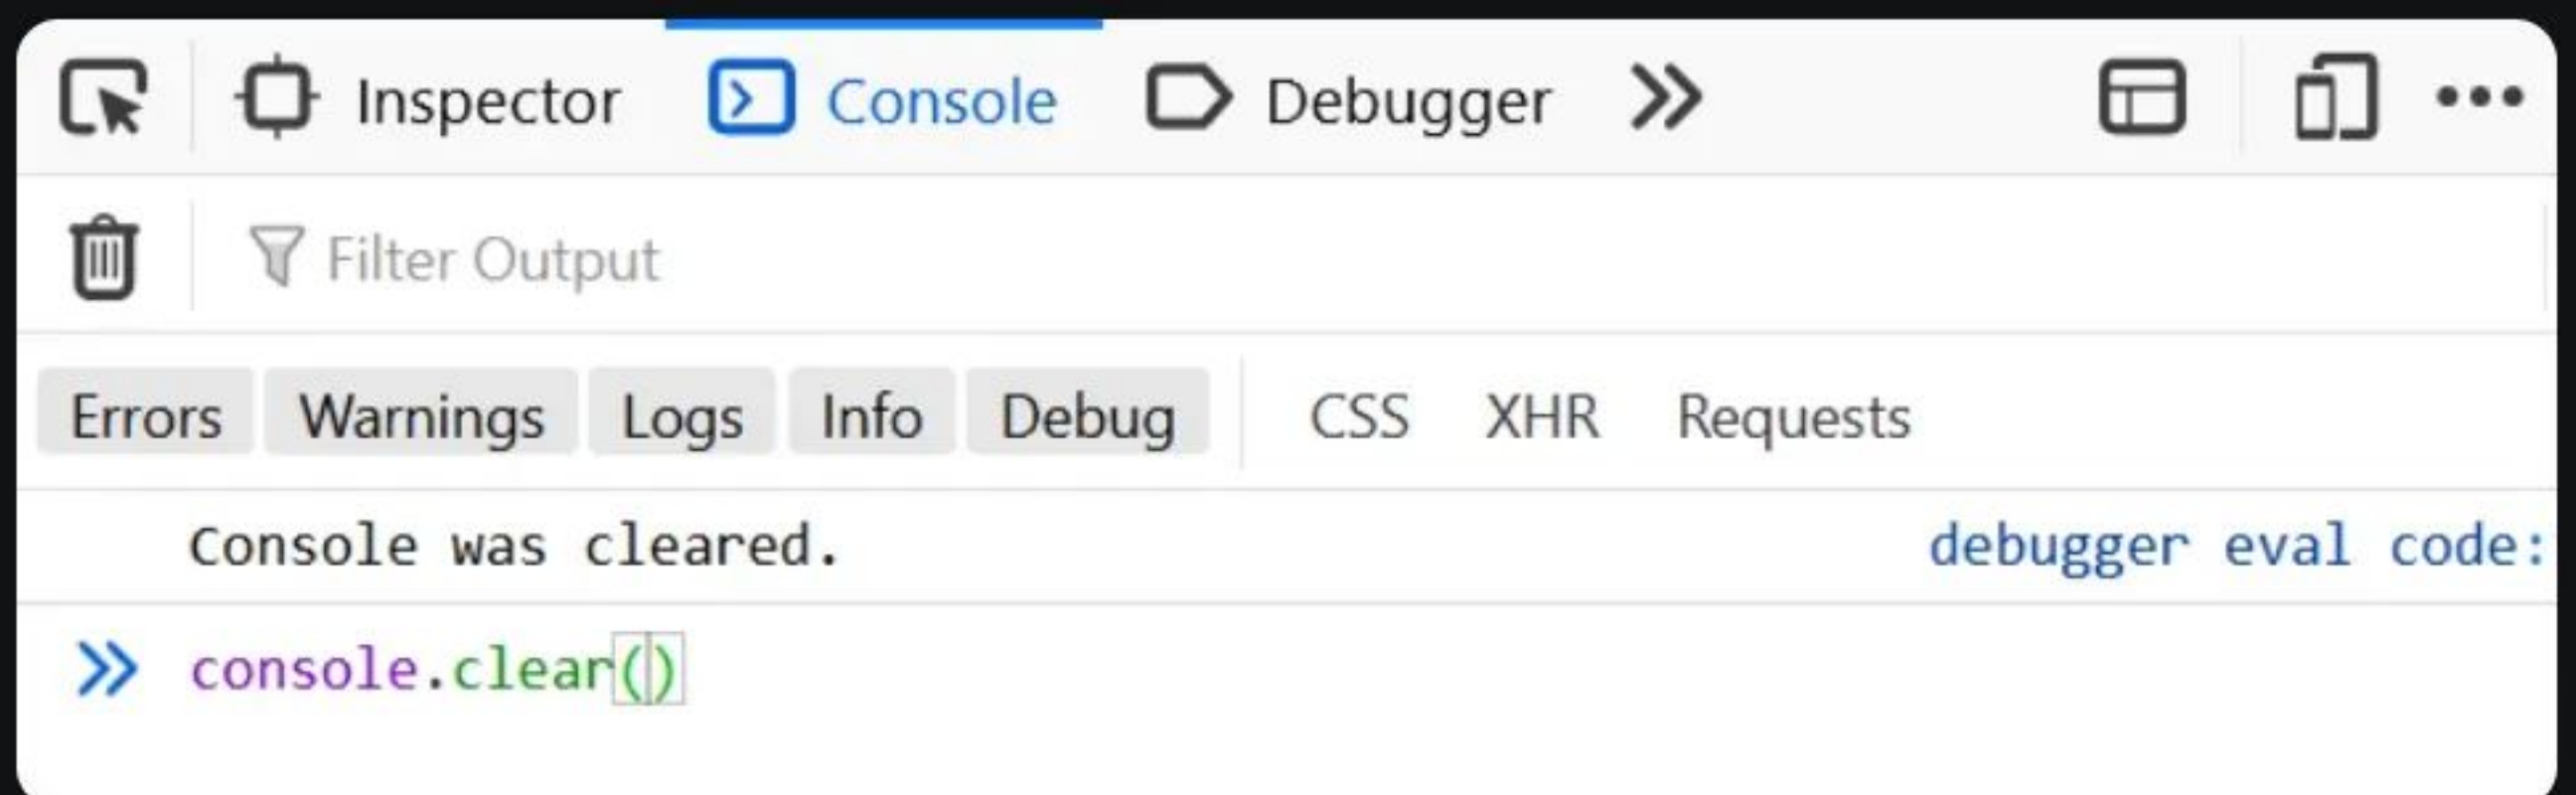

(index)	firstName	lastName	email
0	John	Doe	john@gmail.com
1	Emily	Jones	emily@gmail.com

.clear()

Clears the Browser console.

```
console.clear();
```

Full-stack Dev

.assert()

Writes an error message to the console if the assertion is false.

```
let success = false;  
console.assert(success, "Failed to load! 🤖");
```
