

NEXT.JS

NEXT.JS 14 IS OUT NOW

let's talk

Turbopack

A new bundler that's been built specifically for Next.js. It's **up to 53% faster than Webpack**, and it also **uses less memory**. This means that you can develop and deploy your Next.js applications faster and more efficiently.

next.config.js

```
module.exports = {  
  reactStrictMode: true,  
  turbo: {  
    enabled: true,  
  },  
};
```

Swipe →

Server Actions (Stable)

A new way to perform server-side operations **without having to write custom Express code**. This makes it easier to develop complex Next.js applications, and it also makes it easier to **integrate** Next.js with **existing backend systems**.

```
export default function() {
  // Fetch data from an API
  const data = await fetch('https://api.example.com/data');

  // Return the data to the page
  return {
    props: {
      data,
    },
  };
}
```

Partial Prerendering (Preview)

A new way to prerender dynamic content. This can improve performance and SEO, because it means that your website can start **serving content** to users even **before their JavaScript has loaded**.

```
export default function MyPage() {
  const [products, setProducts] = useState(null);
  ...

  return (
    <Suspense fallback={<div>Loading...</div>}>
      <h1>My Products</h1>
      <ul>
        {products?.map((product) => (
          <li key={product.id}>{product.name}</li>
        )))
      </ul>
    </Suspense>
  );
}
```
